

The future of land access management

What SaskLander is?

Winner of the 2019 Innovation Saskatchewan challenge is the new, made-in-SK, online service for managing private land access. It's made for landowners and operators to post land digitally, with detailed permission options. Land users will be able to use our service to requests access based on permissions set by you. Users consist of individuals for recreation as well as organizations that need access for their business. We keep personal information private but relevant information accessible such as NO ACCESS zones, providing a novel solution to unsolicited access requests and trespassing.

Values

Privacy:

Landowners voluntarily sign up and we will never give out your name or contact information. All interactions are done through the application to protect your privacy.

Accessible information:

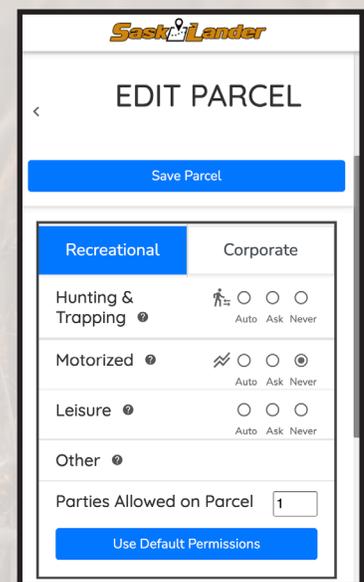

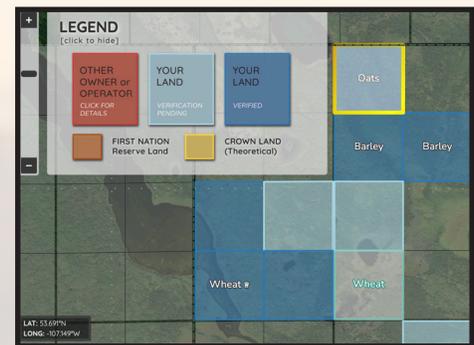

Landowners can digitally post their property as NO ACCESS which is viewable to the public for free. Permissions can also be set to allow paying members to view and request access for activities the landowner approves of.

Stewardship:

We promote good land stewardship through our reporting tools and 2 way rating system to help you decide whos requests to accept.

Key take aways

- Remotely manage land access
- Keep your information private
- Know who, when and what intentions land users have
- Have records of land users
- Strengthen rural communities
